Our Mission

Fasttoken aims to create a most transparent gaming environment, where any deposit and withdrawal transaction, game action, and all fund distributions take place on the Ethereum main chain, without any centralized control.

The Problem

✘ High House Edge

The house edge ranges from 1-15% nowadays, depending on the games you play. The higher the edge, the fewer winnings players receive.

✘ Centralized Payouts

Players rely on the gambling operator to release all their winnings. This poses safety risks and time constraints, especially when it comes to high stake bets.

✘ Third Party Payment Processing

Gambling operators involve at least two intermediaries to carry out the transactions.

✘ Centralized Control

Players have to deposit their funds onto the casino's wallet to play.

✘ Traditional RNG

Current RNGs in most games are predefined. Also, the code isn't open source and there is no way for players themselves to check it for fairness.

Our Solution

✓ **Provably Fair Gaming**

Our games are provably fair and 100% transparent. They can be audited by any person, at any point, at all times. We keep the house edge minimal and even eliminate it in a number of instances.

✓ **Guaranteed Winnings**

Our solution 100% guarantees your winnings with an average transaction time of a few minutes. After a game commences, only the smart contract is in charge of payouts.

✓ **Freedom & Transparency**

No centralized third party controls the flow of funds. All fund distributions, deposits, and withdrawals are recorded on the blockchain, processed independently by the smart contracts.

✓ **Smart Decentralized Control**

The player's funds never end up on the casino's wallet. The casino's funds are transparently stored on a smart contract. The smart contract controls all fund distributions.

✓ **Transparent RNG**

Our RNG is produced live for each spin, dice roll and card revealed in a skill game. Random numbers are taken from both the casino and the player and mixed to form a new number, making it impossible to know the result beforehand.

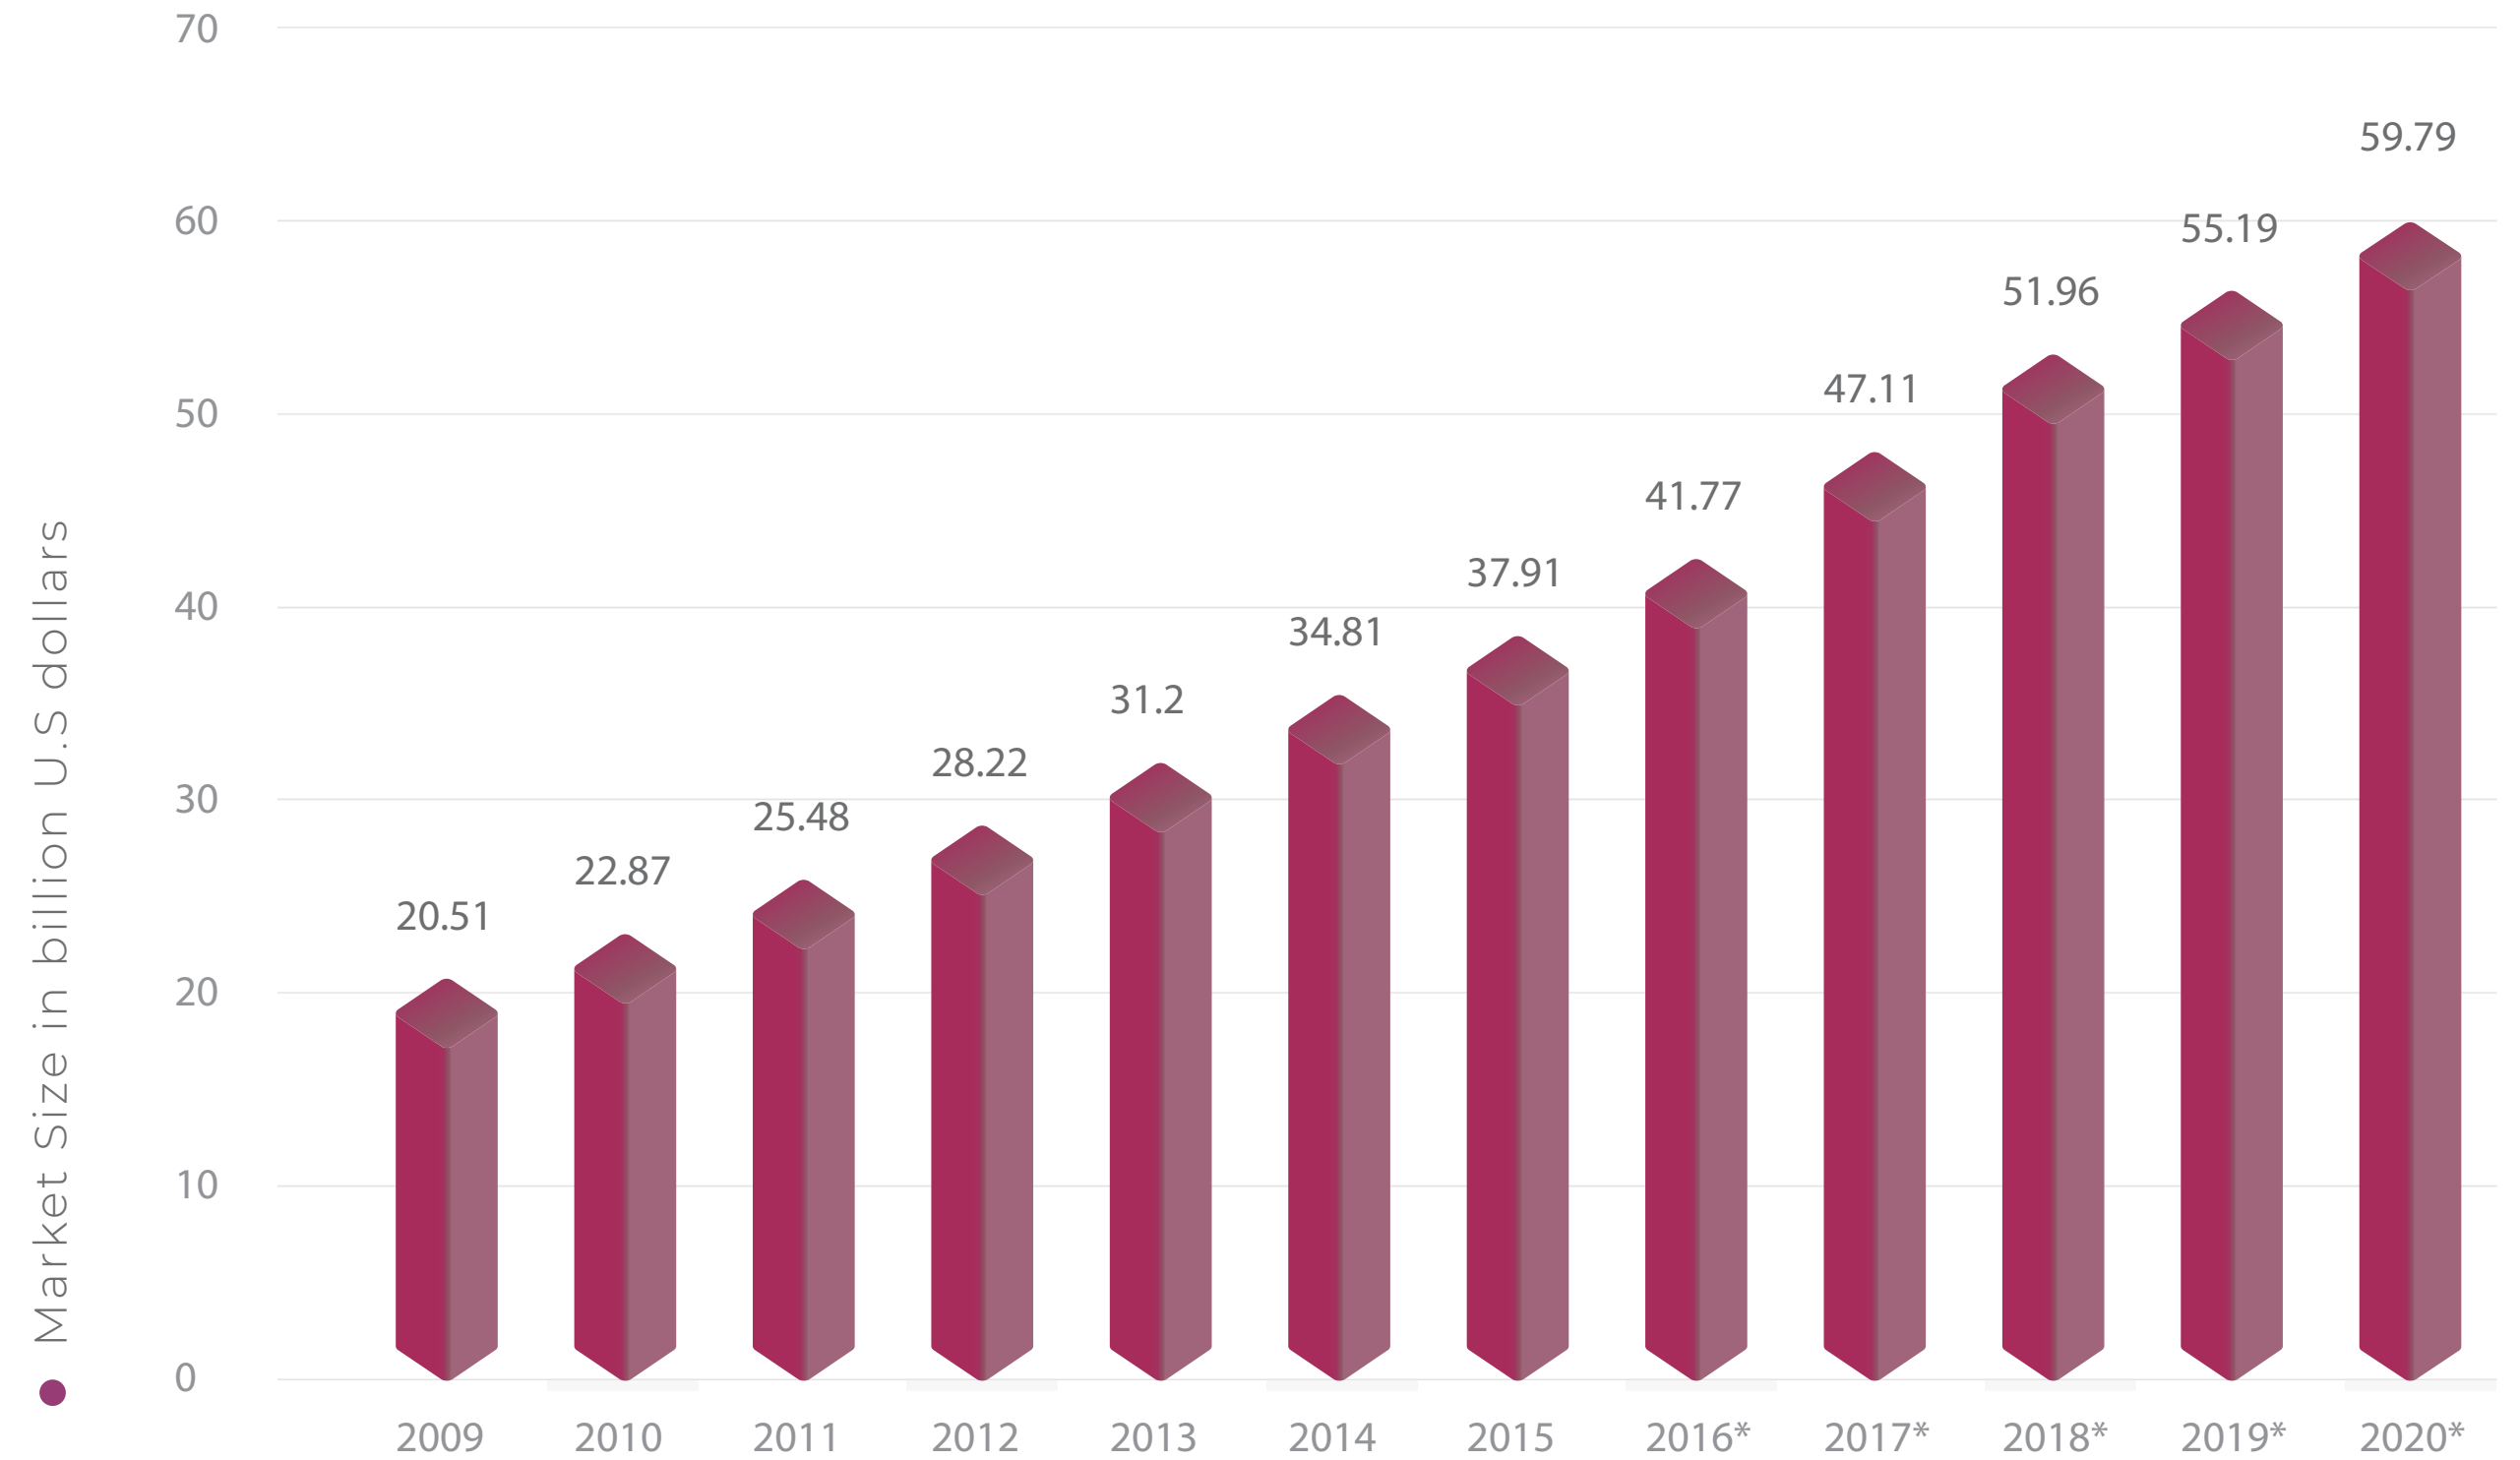

Market Analysis

Gambling Market

- \$55 billion market.
- 10% annual growth rate over the past decade.
- 10 million daily active gamblers worldwide

Cryptocurrency Gambling Market

- Cryptocurrency betting accounted for over 50% of the total transactions in 2013.
- \$24.5 billion worth of bets placed via cryptocurrencies in 2015-2017.
- Over 337 Bitcoin bets per second placed in February 2017

Our Technology

Fast Channels

Fast Channels are custom versions of Ethereum’s state channels, specifically sharpened for the gaming industry. They maximize the processing speed and scalability by taking the actual game and data transfers off the main chain, minimizing the number of required blockchain interactions while remaining 100% verifiable and cheat-proof.

**Unprecedented
Transparency**

**100% Verifiable and
Cheat-Proof Gaming**

Low Costs

**Decentralized
System**

Revenue Model

- *3% fee of Average Betting Volume/Customer/Month*
- *Tournament Revenues*
- *White-label and Turn-key Solutions*
- *Oracles Fees*
- *Sportsbook*
- *Other Services*

Roadmap

Q2-Q3 2020

- Whitepaper registration with Maltese Authorities
- Partner contracts and KYC

Q4 2020

- ERC20 token distribution
- Main Net Launch
- Integration of FTN to Existing Casinos
- Token listing on exchanges
- Decentralized Slot Builder

Q1-Q2 2021

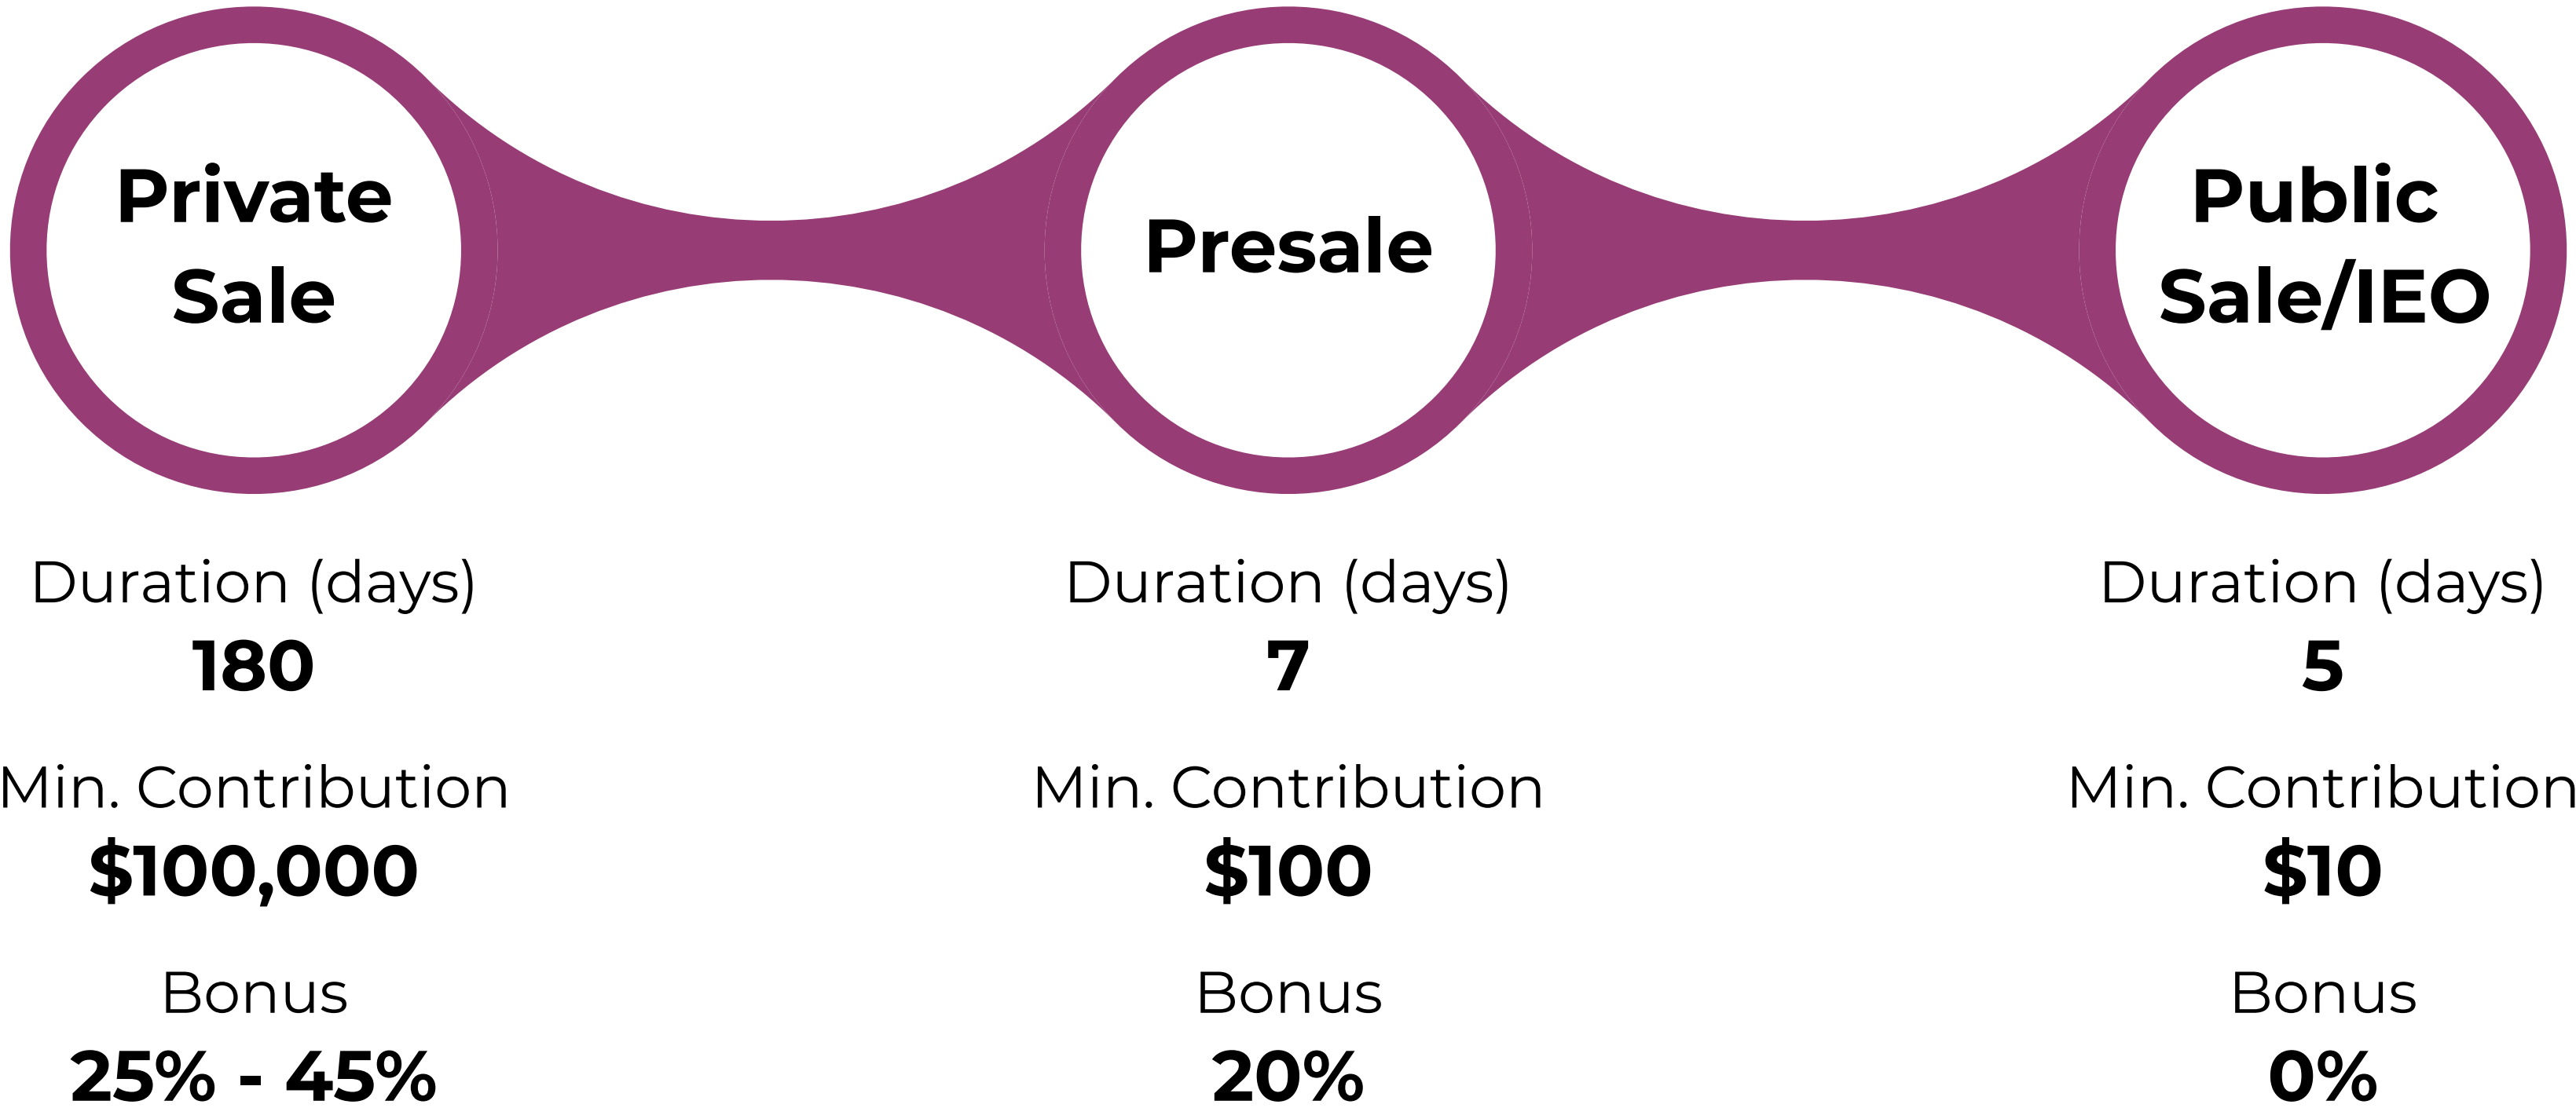

- White label solution ready
- Third party Casino integrations
- Affiliate program integration
- Skill Games Integration with the blockchain

Q3-Q4 2021

- Skill Games Integration with the blockchain
- Betting oracle platform launch

Achievements

- Core team fully assembled
- The first implementation of slot games with side channels.
- Creation of Fast Channel protocol
- Multiple games using final Fast Channels
- Smart Contract codes publicized on GitHub
- Fasttoken contract deployment
- Whitepaper registration with Maltese Authorities (soon)

Funding Used for

- Platform development
- Continuous Testing and Product Improvements
- Partner Integration
- Team Growth
- Marketing and Community Growth
